present Department of Meteorology, University of Reading, UK.

09/2018– **Postdoc scientist.**

02/2019 Wegener Center for Climate and Global Change, University of Graz, Austria.

Research experience

I am studying the impact of past and future climate change on meteorological extreme events based on regional and global climate models. I am interested in compound events (CEs), such as compound flooding happening in low-lying coastal areas due to co-occurring large amounts of precipitation and high sea level. Throughout my PhD, within the international research project CE:LLO, I focussed my scientific research on multivariate statistical modelling and the analysis of CEs. I gained expertise in multivariate statistics, e.g. Pair-copula constructions, regional climate modelling, and collaborated on research about soil moisture drought and multivariate statistical downscaling.
